To: Request for Proposal Holder
Project: Request for Proposals (RFP) for Dry Season Streamflow Monitoring
Attn: Prospective Consultants

Addendum No. 1

Based on questions received and additional information learned since the initial release of the RFP, the following changes and clarifications are being provided. The Addendum forms a part of the RFP documents.

1. Change to Section II. Background

Adds gage coordinates in addition to the figure of gage locations.

Station Name	Latitude	Longitude
San Lorenzo River upstream of Love Creek	37.08801	-122.08772
Newell Creek upstream of San Lorenzo River	37.08204	-122.07973
Zayante Creek at Woodwardia	37.05551	-122.06019
Bean Creek at Mount Hermon Camp	37.05250	-122.05967
Bean Creek downstream Mackenzie Creek	37.068233	-122.015995

2. Change to Section III. Requested Services

Adds re-establish a gage at Newell Creek upstream of San Lorenzo River as part of the 2023 beginning of season activities.

We have learned that the gage has been destroyed by a fallen tree. While we are exploring options for re-establishing the gage, we are requesting that prospective consultants submitting for this RFP include an estimate in their cost proposal and confirmation that key staff have experience with re-establishment of a gage in the vicinity of the current location. Assume that SMGWA will provide the data loggers for the site.

3. Clarification to Section III. Requested Services

Clarifies that records of stream, streamflow, temperature, and specific conductance need to be uploaded once per year by December 31st over the three-year period.

4. Change to Section V. Submittal Requirements and Proposal Format

Increases total proposal length by allowing for a title page and table of contents that will not be counted as part of the 20-page proposal limit.
